### Quick Fix

Something you can do right now

#### Reduce your water heater's temperature

Setting your water heater's temperature too high can cause scalding and wastes energy. For every 5°C you lower the temperature, you can save 5% on your water heating costs. Natural Resources Canada recommends setting the temperature no lower than 60°C.

Check the owner's manual for safety instructions before making any changes to your water heater's settings. Use a thermometer to check the temperature of the water flowing from your faucets.

SAVE UP TO  
**\$25** PER YEAR

### Smart Purchase

An affordable way to save more

#### Install efficient showerheads

Showering accounts for about 40% of your hot water use, but you can cut costs without sacrificing comfort.

If your shower fills a 4-litre bucket in less than 20 seconds, you could save with an efficient showerhead. These showerheads, with flow rates no greater than 10 litres per minute, help reduce hot water use while maintaining water pressure.

You can realize significant savings with efficient showerheads, especially if you have a large household.

SAVE UP TO  
**\$85** PER YEAR

### Great Investment

A big idea for long-term savings

#### Replace your old clothes washer

ENERGY STAR® certified clothes washers use about 55% less energy and 35-50% less water than non-certified models.

New, efficient washers spin more water out of clothes, so your dryer won't have to work as hard. They can handle larger loads and are gentler on your clothes, too.

Conventional washers manufactured before 2001 are especially inefficient. If you have one, consider an upgrade soon.
